The use of technology for workplace and occupational testing blossomed in the early years of this century. This book offers a demonstration that the first generation of these technologies have now been implemented long enough to observe the patterns and issues that emerge when these approaches evolve through technical advancement and successive application. A new set of issues and opportunities has emerged and the next generation of these applications is now coming of age. This book reflects on the last few decades of this evolutionary process from a vantage point of global experience across a wide range of workplace applications, including employment selection, development, and occupational certification. The themes and issues that arise as this broad treatment unfolds provide an essential foundation for students, researchers, and professionals who are involved with the assessment of human capability and potential in organizational and workplace contexts. The field of Strategic Human Resource Management (SHRM) has burgeoned over the past thirty years. Over this time there has been a shift towards a strategic conception which posited workers as ‘assets’ rather than ‘costs’. These ‘human resources’ were reconceptualised as a key source of competitive advantage. As such, these assets were to be treated seriously: selected with care, trained and developed, and above all, induced to offer commitment. The concept of ‘human capital’ came to the fore, and in the decades following these developments, research output has been voluminous. Strategic Human Resource Management: A Research Overview, authored by global research leaders, provides an expert summary of this crucial element of organizational performance. This new shortform book develops the argument that one of the crucial elements of organizational performance is the way work is organized in skill and talent packages both within an organization’s boundary and across global competency clusters. Secondly, it focuses on current and emergent challenges. The ‘package’ of HR approaches has changed over time and patterns can be observed. This new volume pays special regard to the HR implications arising from radically altering contexts – economic, social, and technological. This concise volume covers crucial themes of lasting interest, and as such is essential reading for business scholars and professionals. The chapters published in this volume provide cutting edge ideas by leading scholars, and help to inform mergers and acquisitions research around the world. Personality has emerged as a key factor when trying to understand why people think, feel, and behave the way they do at work. Recent research has linked personality to important aspects of work such as job performance, employee attitudes, leadership, teamwork, stress, and turnover. This handbook brings together into a single volume the diverse areas of work psychology where personality constructs have been applied and investigated, providing expert review and analysis based on the latest advances in the field. Jones examines the difficulties of the World Trade Organization (WTO) in completing multilateral trade negotiations and possible ways to improve the situation. The problem lies in the institutional structure it inherited from the General Agreement on Tariffs and Trade (GATT), which was designed for a more limited scope of trade negotiations among wealthier, industrialized countries. The book presents a model of the GATT/WTO system as a global institution, based on the accepted goals, rules, and obligations of the members, as well as the output the institution is expected to generate. Using interdisciplinary perspectives to further this understanding and serving as a focal text from which this research will grow, it tackles three main questions facing the field. First, how has technology affected IO psychological theory and practice to date? Second, given the current trends in both research and practice, could IO psychological theories be rendered obsolete? Third, what are the highest priorities for both research and practice to ensure IO psychology remains appropriately engaged with technology moving forward? We are proud to introduce the proceedings of the Seventh International Conference on Parallel Problem Solving from Nature, PPSN VII, held in Granada, Spain, on 7–11 September 2002. PPSN VII was organized back-to-back with the Foundations of Genetic Algorithms (FOGA) conference, which took place in Torremolinos, Malaga, Spain, in the preceding week. The PPSN series of conferences started in Dortmund, Germany [1]. From that pioneering meeting, the event has been held biennially, in Brussels, Belgium [2], Jerusalem, Israel [3], Berlin, Germany [4], Amsterdam, The Netherlands [5], and Paris, France [6]. During the Paris conference, several bids to host PPSN 2002 were put forward; it was decided that the conference would be held in Granada with Juan J. Merelo Guervós as General Chairman. The scientific content of the PPSN conference focuses on problem-solving paradigms gleaned from natural models, with an obvious emphasis on those that display an innate parallelism, such as evolutionary algorithms and ant-colony optimization algorithms. The majority of the papers, however, concentrate on evolutionary and hybrid algorithms, as is shown in the contents of this book and its predecessors. This edition of the conference proceedings has a large section on applications, both to classical problems and to real-world engineering problems, which shows how bioinspired algorithms are extending their use in the realms of business and enterprise. This comprehensive text covers the entire field of human resource development, from orientation and skills training, to career and organizational development. It shows how concepts and theory have been put into practice in a variety of organizations. This sixth edition of HUMAN RESOURCE DEVELOPMENT reflects the current state of the field, blending real-world practices and up-to-date research. The concept of emotional labor was first proposed by Dr. Arlie Russell Hochschild (1983), who defined it as "the management of feeling to create a publicly observable facial and bodily display" (p. 7) for a wage. A basic assumption of emotional labor theory is that many jobs (e.g., customer service, healthcare, team-based work, management) have interpersonal, and thus emotional, requirements and that well-being and effectiveness in these jobs is determined, in part, by a person's ability to meet these requirements. Since Hochschild's initial work, psychologists, sociologists, and management scholars have developed distinct theoretical approaches aimed at expanding and elaborating upon Hochschild's core ideas. Broadly speaking, emotional labor is the study of how emotion regulation of oneself and others influences social dynamics at work, which has implications for performance and well-being in a wide range of occupations and organizational contexts. This book offers researchers and practitioners a review of emotional labor theory and research that integrates the various perspectives into a coherent framework, and proposes an agenda for future research on this increasingly relevant and important topic. The book is divided into 5 main sections, with the first section introducing and defining emotional labor as well as creating a framework for the rest of the book to follow. The second section consists of chapters describing emotional labor theory at different levels of analysis, including the event, person, dyad, and group. The third section illustrates the diversity of emotional labor in distinct occupational contexts: customer service (e.g. restaurant, retail), call centers, and caring work. The fourth section considers broader contextual influences – organizational-, societal-, and cultural-level factors – that modify how and when emotional labor is done. The final section presents a series of 'reflective essays' from eminent scholars in the area of emotion and emotion regulation, where they reflect upon the past, present and future of emotion regulation at work.
