"The Texas Folklore Society has been alive and kicking for over one hundred years now, and I don't really think there's any mystery as to what keeps the organization going strong. The secret to our longevity is simply the constant replenishment of our body of contributors. We are especially fortunate in recent years to have had papers given at our annual meetings by new members—young members, many of whom are college or even high school students. "These presentations are oftentimes given during sessions right alongside some of our oldest members. We've also had long-time members who've been around for years but had never yet given papers; thankfully, they finally took the opportunity to present their research, fulfilling the mission of the TFS: to collect, preserve, and present the lore of Texas and the Southwest. "You'll find in this book some of the best articles from those presentations. The first fruits of our youngest or newest members include Acayla Haile on the folklore of plants. Familiar and well-respected names like J. Rhett Rushing and Kenneth W. Davis discuss folklore about monsters and the classic 'widow's revenge' tale. These works—and the people who produced them—represent the secret behind the history of the Texas Folklore Society, as well as its future."—Kenneth L. Untiedt

Earth Day celebrates our beautiful planet and calls us to act on its behalf. Some people spend the day planting flowers or trees. From the resumption of automobile production at the close of World War II through the 1950s, the American auto industry would see the births and deaths of several manufacturers, great technological advances, and an era of dramatic styling as a prospering nation asserted its growing mobility. Cars of this period are among the most iconic vehicles ever built in the United States: the 1949 Ford, the remarkable Studebaker designs of 1950 and 1953, the 1955 – 1957 Chevrolets, the " Forward Look " Chrysler products, the ill-fated Edsel and many others. This comprehensive reference book details every model from each of the major manufacturers (including independents such as Kaiser-Frazer and Crosley but excluding very low-volume marques such as Tucker) from model years 1946 through 1959. Year by year, it provides an overview of the industry and market, followed by an individual report on each company; its main news for the year (introductions or cancellations of models, new engines and transmissions, advertising themes, sales trends etc.); its production figures and market status; and its powertrain offerings, paint colors and major options. The company 's models are then detailed individually with such information as body styles, prices, dimensions and weights, standard equipment and production figures. Nearly 1,000 photographs are included.

This first book of its kind tells the behind-the-scenes story of the incredibly illegal Cannonball rally. This best seller is now available in paperback!In the early 1970s, Brock Yates, senior editor of Car and Driver Magazine, created the now infamous Cannonball Sea-to-Shining-Sea Memorial Trophy Dash: a flat out, no-holds-barred race from New York to Los Angeles. Yates, out to prove that well trained drivers could safely navigate the American highways at speeds in excess of the posted limits, Mr. Yates created a spectacle reminiscent of the glory days of the barnstorming pilots. Filled with fascinating unpublished stories, nostalgic and modern-day photographs, inside information and hilarious stories from the participants, this is one of the most entertaining and best-selling books of the past decade. It is one of the best-known, most respected automotive journalists in the world today.

"If good design tells the truth," writes Robert Grudin in this path-breaking book on esthetics and authority, "poor design tells a lie, a lie usually related . . . to the getting or abusing of power." From the ornate cathedrals of Renaissance Europe to the much-maligned Ford Edsel of the late 1950s, all products of human design communicate messages. Good design holds both psychological and moral power over us, and these forces may be manipulated, however subtly, to surprising effect. In an argument that touches upon subjects as seemingly unrelated as the Japanese tea ceremony, Italian mannerist painting, and Thomas Jefferson's Monticello plantation, Grudin turns his attention to the role of design in politics and economic powers impress themselves on us through the built environment. Although architects and designers will find valuable insights here, Grudin's intended audience is not exclusively the trained expert but all those who use designs and live within them every day.

What was America? The question resounds today more than ever. While countless contemporary textbooks have sought to relate this country's history, most have done so in fragmented, diluted, or unapproachable ways. These two volumes break down all the barriers to a full understanding of America: it has just two authors, each with a strong point of view; it is told in pure narrative form, befitting its riveting story, and it is as low-cost a textbook as there has ever been. Unlike other open access textbooks, Building the Republic is authoritative and coherent. Throughout, Harry Watson and Jane Dailey emphasize the enduring and multifarious influence of religion, the evolution of law and legal norms, and the distinctive history and influence of the South. And they take a capacious view of the role of politics in US history, beyond simple "political history." These two volumes sweep the reader up in the inimitable history of a country forever remaking itself.
